Philips Future Health Index 2024: Tackling Staffing Shortages

Becker's Healthcare: The State of Nurse Retention

About Us

CliniShift is an open shift, communication platform which enables healthcare managers to reach out to their own internal staff to ensure all non-scheduled shifts are filled at short notice. Our software is powered by the CliniShift Manager web portal and the CliniShift App for staff. It helps organizations build and manage internal float pools. In a group structure, organizations can share staff amongst different worksites & create an internal staffing agency.

Tech Solutions for Staffing Challenges

According to the Philips Future Health Index 2024 report, 92% of healthcare leaders believe that automating tasks like staff scheduling can significantly alleviate pressure by streamlining operations and freeing up time for direct patient care. Automation tools are proving vital in reducing administrative tasks and optimizing workflows, improving both job satisfaction and patient outcomes.

Optimizing Staff Scheduling

Our platform offers a seamless, real-time staff scheduling solution designed to reduce the complexities of shift management. By enabling instant communication and last-minute shift fulfillment, we help healthcare organizations improve staff retention, avoid burnout, and ensure better patient care.

CliniShift empowers healthcare professionals by offering flexibility and control over their schedules. This promotes a healthier work-life balance, reduces stress, and enhances job satisfaction.

2024 Nurse Retention

Nurse retention is improving, with fewer nurses leaving their roles compared to last year. However, about 30% of nurses still feel undervalued, and factors like better pay, manageable workloads, and flexible scheduling remain crucial for improving retention. Addressing these issues will promote long-term workforce stability.
